Coalition for a Drug-Free Hawaii

Attn: Susan Oka

Attn: Susan Oka 1130 N. Nimitz Hwy. Suite A259 Honolulu, HI 96817

Registration Deadline

Friday, May 26 2017 Open to first 45 registrants This training will introduce participants to the impact of drug use on the brain and developing fetus by two dynamic speakers, Dr. Darryl Inaba and Dr. Ann Yabusaki. Dr. Darryl Inaba has offered his professional expertise to the addiction field through years of research, education and awareness of how the brain is impacted by excessive substance use, addiction and recovery. He uniquely shares how brain function is changed with substance use and what that means to the counseling, treatment and medical fields in working directly with substance abusers. He leaves you with more awareness of how the brain operates in addiction and how the field can better use this knowledge to develop treatment and long term care of these individuals.

The training will transition with Dr. Ann Yabusaki's presentation of substance use during pregnancy. In working with adolescents she has found that many of our youth navigate life with an invisible disorder - Fetal Alcohol Spectrum Disorder (FASD). This introduction to FASD, describes a wide range of effects that can occur in individuals prenatally exposed to alcohol. FASD related disabilities are often undiagnosed and misdiagnosed, and are not or rarely included in most health data measures of alcohol related disabilities. Thus, estimates of the prevalence of FASDs are misleading. FASD is more prevalent than autism, spina bifida, cerebral palsy and Down Syndrome combined. The reality of supporting and guiding individuals with FASD has a lifelong impact on the individual, the family, their social life and those trying to educate, support and work with them.

Come learn from both Dr. Inaba and Dr. Yabusaki how you can move our community to awareness and nurturing support of those living with the impact of substance use.

We welcome those in the prevention, treatment, counseling, education, medical fields and others interested in the topics.
